**Dear Brother Shaukat Hussain  
Executive Director  
ICNA Relief CANADA**

Assalam-o-Alaikum

**Subject: Completion Report... Installation of 20-KVA Generator at 'Markaz Uloom-e-Islamia'**

It is gladly stated that the project of 'Installation of 20-KVA Generator at Markaz Uloom-e-Islamia' has been completed. The project aimed to facilitate the education and residence of the students, and protection of electric appliances.

**Markaz Uloom-e-Islamia** has been providing free of cost educational and basic residential facilities to the students. A well-equipped computer laboratory facility is available for the students but due to irregular power-cuts, computers were not able to be used while installation of this generator has given the institute a continuous supply of electricity.

Additionally, irregular power-cuts and electricity fluctuation had resulted in the damage of several electric appliances but now all electric appliances have been secured from electric fluctuations.

Total cost of the project was **PKR 755,905 (C\$ 8,000)**.

May Allah Subhan Wa Tallah bless your efforts.

With regards,

**Dr. Hafeez ur Rahman  
President  
Al-Khidmat Foundation Pakistan**

## Project Summary

Project Title:	Installation of 20-KVA Generator at Markaz Uloom-e-Islamia
Location:	Lahore
Beneficiaries:	200 students and 31 staff members
Objectives:	To facilitate the education and residence of the students, and protection of electrical appliance.
Total Project Cost:	755,905 (C\$ 8,000)
Duration:	Three Months
Submitted To:	ICNA Relief Canada
Submitted by:	Al-Khidmat Foundation Pakistan
Contact Person:	Shahid Iqbal Executive Director Cell No: 92-333-9062288

## **Background and Need of the Project:**

Prolonged and unscheduled power-cuts due to gap between generation and consumption of electricity have adversely affected the routine life, business activities, industrial sector and educational activities across Pakistan.

According to PEPCO sources, power shortfall was 6000MW but independent sources claim that at day time shortfall climbs above 7000MW figure as consumption increases due to surge in temperature. PEPCO spokesman said that decrease in water reservoirs and halt in provision of fuel to power plants was a major cause in reduction in power generation.

In such scenario students of Markaz Uloom-e-Islamia were also in a misery as there was no schedule for power cuts so installation of a generator was need of the hour.

## **Impacts of the Project:**

There have been three basic impacts of the said project. First impact is that students do not have to worry about scheduled power cuts because they have an alternate source of electricity which allows them to continue their educational activities unhindered.

Second impact is improved academic performance of the students of Markaz Uloom-e-Islamia as students had been performing poor in their studies because their assignments, preparation of exams and proper routine life was disturbed due to electric uncertainty.

Third impact of this project is that electric appliances, especially a well equipped computer lab, have been secured from the harmful effects of electric fluctuations.

## **Implementation Strategy:**

- Al-Khidmat Foundation Pakistan implemented and supervised this project.
- Project items were purchased as procurement policy of Al-Khidmat Foundation Pakistan.
- Proper arrangements were made for donor visibility and publicity.
- Final Report (with photos) is being sent to you as the project has completed.
